Vacupor® NT

Characteristics

Vacupor® NT is a microporous insulation material with an extremely low coefficient of thermal conductivity, i.e. with very good insulating properties. Vacupor® NT consists of inorganic oxides. The main constituent is fumed silica, the other components are opacifiers for minimizing infrared radiation, and silicates.

Vacupor® NT (core material) is not flammable and meets the requirements of IMO FTPC part 1 and DIN ISO 4102 part 1, A1. Vacupor® NT is heat sealed in a metallized, multilayer plastic film under vacuum. The very low internal pressure and the microporous panel core is responsible for the extremely low thermal conductivity values.

Application

Vacupor® NT was specially developed for applications in vacuum insulation technology. The low density and the specially developed IR opacifiers contained in these grades greatly reduce the thermal conductivity of Vacupor® NT Systems.

Vacupor® NT is also successfully used as insulation material in the following areas:

- Domestic appliances (refrigerator and freezer cabinets)
- Absorption refrigerators
- Cryogenic freezer
- Temperature controlled packaging
- Transport boxes
- Facade elements
- Terrace insulation
- Cold storage floor insulation
- Tank container insulation

Form of delivery

1. Standard sizes:
   - 600 mm x 250 mm
   - 1000 mm x 300 mm
   - 600 mm x 500 mm
   - 1200 mm x 500 mm
   - 1000 mm x 600 mm
   - 1200 mm x 1000 mm

2. Standard thicknesses:
   - 10 mm, 15 mm, 20 mm, 25 mm, 30 mm
   - Further thicknesses on request

3. Special formats available on request

Restrictions on Applications

The metallized, multilayer plastic film of the Vacupor® NT must not be damaged by drilling, cutting, milling, nailing or the like, since the interior pressure of the panel will rise and the special properties of the panel, in particular its excellent insulation characteristics, will be lost.

Shelf life

Vacupor® NT has a very long shelf life. Please also observe our pressure rise table: Thermal conductivity as a function of interior pressure.

**Vacupor® NT (core material) is insensitive to high and low temperature thermal shocks.**

Please note:

Vacupor® NT is not approved by the German building and construction authorities for building applications.

Vacupor® NT may just be applied in areas where a Vacuum Insulation Panel is treated as an unregulated construction product, if an admission on a single case exists or will be obtained. The thermal conductivity value just describes the value of the Vacuum Insulation Panel under the mentioned conditions, measured in the center of the panel.

The measured value does explicitly not correspond with the rated value, determined by the DIBt and may not be used in Germany for the implementation of thermal calculations for buildings.

---

1) Dependent on board thickness
2) Dependent on the panel-size and –thickness, internal pressure can be between 0.5 – 5 mbar. The standard internal pressure in the evacuation chamber is < 0.5 mbar.
3) The limits are fixed by the barrier film (sealing material) used; constant load: ≤ 80°C (176°F); short load time with 120°C (248°F): roughly 30 minutes.

The above data are only intended as a guide and should not be used in preparing specifications.
Thermal conductivity (panel core) DIN 52612

- Thermal conductivity (TC) in W/mK as a function of mean temperature in °C.

Compression behavior (panel core)

- Compression behavior at different pressures (1 bar, 2 bar, 3 bar).

Low-temp. Compression strength (panel core)

- Low-temperature compression strength as a function of density in kg/m³.
Safety directions

Vacupor® NT is not a hazardous material as defined in EU directive 2006/1907/EEC.
Please also observe our material safety data sheet.
Vacupor® NT does not liberate hazardous decomposition products and, as far as is known at present, does not cause any problems to human health or the environment.

The data presented in this leaflet are in accordance with the present state of our knowledge, but do not absolve the user from carefully checking all supplies immediately on receipt. We reserve the right to alter product constants within the scope of technical progress or new developments. The recommendations made in this leaflet should be checked by preliminary trials because of conditions during processing over which we have no control, especially where other companies’ raw materials are also being used. The recommendations do not absolve the user from the obligation of investigating the possibility of infringement of third parties’ rights and, if necessary, clarifying the position. Recommendations for use do not constitute a warranty, either express or implied, of the fitness or suitability of the product for a particular purpose.
